Announces wePresent WiPG-2000 interactive presentation gateway

Taiwan-based Awind Inc, provider of wireless presentation solutions, is pleased to announce that it has extended its WePresent product line with the brand new wePresent WiPG-2000 interactive presentation gateway. With the wePresent WiPG-2000, presenters and teachers can easily connect and share wirelessly from desktop, laptop, tablet and smartphone. Features of the wePresent WiPG-2000 include Power over Ethernet (PoE), a new ultra-high quality video streaming mode, Universal Multi-Touch support and the option to share your contents from a USB drive. The wePresent WiPG-2000 will be shipped from July onwards.

Complementing the highly successful **wePresent WiPG-1000** and **wePresent WiPG-1500** models, the **wePresent WiPG-2000** is Awind's flagship interactive presentation gateway, offering best-in-class features for wireless presentation. The unit is perfectly suited for use in corporate environments, where employees and visitors can easily share contents from their laptop, tablet or smartphone, and also for educational environments, where teachers and students can share their info on screen.

Thanks to the integrated WebSlides function, remote users can now also access the presentation shared on screen, whereas the new annotation tools allow presenters to highlight on presentation materials. Other product highlights include the Conference Control mode, to allow or block some people from presenting, easy access for guest presenters with the Plug and Show USB token, and the option to stream video directly from your USB-stick.

Features of the **wePresent WiPG-2000** platform:

- Share contents from desktop, laptop, tablets, smartphones or USB wirelessly to your screen.
- Connect and share up to four sources simultaneously
- MirrorOp Presenter apps to share from any iOS or Android device

- Direct video streaming from your PC, with decoding on the WePresent unit to provide original video quality without any distortion at all
- Universal Multi-Touch (UMT) support to connect your touch screen or interactive whiteboard. Annotating, writing and drawing can be done using your touchscreen, AirPad or any other USB HID devices
- Plug and Show USB token to allow easy access for guest presenters who can run all required applications from the USB token and no longer need to install a software client on their devices. As an alternative, guests can also share contents through the USB player included in the **wePresent WiPG-2000** unit, without the need for a PC/Laptop
- Conference Control for educational or seminar-like environments
- Share your presentation over IP with WeSlides mode so that remote users also have access to the presenter's slides

The **wePresent WiPG-2000** will be available from July onwards, through Awind's distribution network.
