Press Release

AWIND ANNOUNCES WIRELESS PRESENTATION PRODUCT FOR BUSINESS CONFERENCES, EVENTING, AND EDUCATION

TAIPEI, TAIWAN (22 February, 2006) –Awind Inc., a provider of wireless multimedia networking devices and solutions for business presentations, has announced its **AirPresenter** product—a Wireless presentation system. The **AirePresenter** product connects Windows PC and projectors through standard WLAN technologies. It takes information sharing to new heights of convenience and efficiency whether in a classroom, exhibition hall, or anywhere PC screen needs to be shared among several people. Teaching materials and image-rich corporate data can be sent directly to other participants' computers so that presentations flow like a conversation.

The **AirPresenter** product consists of Awind's sophisticated **AirPresenter** WEB management application software, and one **AirPresenter** adapter. The Adapter can be connected directly to a projector. The WEB management software is installed as needed in any PC that will be participating in the presentation, either as a presenter or a passive viewer.

In use, any connected PC can be given control of the system to transmit presentation or to display data and documents via the projector and/or directly on the screens of the other participating PCs. When another user is ready to present, the wireless link and control of the system can easily be switched to that PC with just a few keystrokes, allowing any participants to take control and to broadcast their information and materials to everyone else, from the comfort of their seats if they choose.

Based in Taipei, Taiwan, Awind is an ODM developer, manufacturer and supplier of multimedia IP networking products and solutions for 802.11x WLANs. Awind also provides other integrated solutions for business applications and development services for OEMs, brands, ad VARs worldwide. For more information, please visit www.awindinc.com,
