Press Release

MobiShow is launched into the market at Christmas

Born of expertise in delivering high-definition, PC-based presentations to the television screen, MobiShow makes it easy to discover and watch IP-based video. Interesting enough. But it's the transcoding of PC-based video into high-definition video scaled to fit the television screen that makes Awind's offering remarkable. We predict a successful direct-to-consumer offering and anticipate the integration of this technology into many other consumer products.

– quote from DEMOshow official site

(<http://www.demo.com/demonstrators/demo2008fall/147314.html>)

MobiShow, made its debut in DEMOfall and got DEMOgod award, is a WiFi-enabled device that allows users to use SmartPhones to present PowerPoint slides, HD videos and Desktop wirelessly without a PC. MobiShow is built on the mTVic platform which provides an easy-to-setup, efficient and cost-effective wireless solution to migrate SmartPhones and PC applications to any VGA connected display devices. This would be extremely useful for the road warriors who until now have been forced to try to always remember to bring the various cables and connections they need to hook up to clients' projection systems. Instead, they can rely solely on their mobile device or computer. MobiShow (Model: MS-200) now is available in Taiwan market after Christmas. After that, Asia, USA, and Europe markets will be available in 2009 Q1.
